EXECUTIVE SUMMARY

This report highlights research funding at the University of Missouri using data provided by the National Science Foundation (NSF). More specifically, it examines research funding at the public AAU institutions and at the four campuses of the University of Missouri. NSF data have been used because they provide consistent data on research funding for all thirty-two public AAU institutions. Please note that the data used in this study are from fiscal year 1999. Although more recent data are available for the University of Missouri, this is the most recent data available for all public AAU institutions. References to the "University of Missouri" or the "University" refer to the four-campus system. Trends in research funding have been examined from 1990 to 1999 and from 1995 to 1999.

The key findings include:

Federal Research Expenditures

- On average, federal research expenditures at the University of Missouri have increased 64% since 1995 and 132% since 1990. This compares to an increase of 18% and 67%, respectively, at the public AAU institutions (Table 1).
- From 1995 to 1999, the University's market share in federal research expenditures among the public AAU institutions increased from 1.11% to 1.54%. (Table 2).
- In terms of federal research expenditures, the University of Missouri ranked 27th among the 32 public AAU institutions in 1999. The University held the rank of 29th in 1990 (Table 3).
- Eighteen of the thirty-two public AAU institutions in 1999 relied on one disciplinary area to provide the majority of their federal research expenditures. In each of these eighteen cases, the discipline area was life sciences (Table 4).

Industry-Sponsored Research Expenditures

- On inspection of the University of Missouri's Industry-Sponsored Research and Development Expenditures, there appears to be a large decline between 1995 and 1996. However, new accounting methods have been responsible, in part, for this decline. Increase, with comparable accounting methods, since 1996, has been steady (Table 6).
- The University of Missouri funds a higher percentage of its research program (41%-50%, depending on campus) with institutional funds than all but one other public AAU institution (Table 7).

ORGANIZATION

The report has been organized into the following sections:

Section I: Federal Research Expenditures (Tables 1–5)
Section II: Research Expenditures from Industry (Table 6)
Section III: Research Expenditures by Source of Funds (Table 7)

Section IV: Definitions and Technical Notes

Appendix A & B: Research Expenditures and Campus Comparison Groups

SECTION I: FEDERAL RESEARCH EXPENDITURES

The federal research expenditures reported in this section include expenditures classified as science and engineering (S&E) research and development (R&D) funds. When trend data are examined, increases or decreases in funding are noted from 1990 to 1999 and from 1995 to 1999. In addition, a definition of *federal research expenditures* is provided in Section IV: Definitions and Technical Notes.

Federal Flow-Through Expenditures

Beginning in 1996, federal research expenditures for the University of Missouri include federal flow-through expenditures. Originating from a federal agency, these expenditures have been awarded to industry, state agencies in Missouri, foundations, or another college or university and then passed on to the University of Missouri. The University has typically classified these expenditures based on the intermediary (i.e., industry, etc.). In 1996, however, the University of Missouri began classifying these expenditures based on their original source, the federal government. Consequently, the increase in federal research expenditures in fiscal years 1996, 1997, 1998 and 1999 for the University of Missouri can be partially attributed to this NSF-accepted classification method.

Please note that annual totals in research expenditures for FY1996 and FY1997 were retroactively changed in 1999. Consequently, these revised totals will not match previously published figures for these two fiscal years.

Table 1:

Public AAU Institutions: Trends in Federal Research Expenditures

Table 1 shows the trend in federal research expenditures for the public AAU institutions and the four campuses of the University of Missouri. Percentage increases in funds are displayed since 1990 and 1995.

• On average, federal research expenditures at the University of Missouri have increased 64% over the past three years and 132% over the past nine years. This compares to an increase of 18% and 67%, respectively, at the public AAU institutions.

The University of Missouri had the most significant percentage gains (64% since 1995 and 132% since 1990) among the public AAU institutions. The University of Maryland, the University of Florida, and the University of Colorado have also made significant percentage gains among the public AAU institutions.

Source: National Science Foundation, Survey of Research and Development Expenditures at Colleges and Universities, FY 1999, B-33. Federally Financed R&D Expenditures at Universities and Colleges: Fiscal Years 1992-1999.

^{*} Federal flow-through funds are included in the University of Missouri figures beginning in FY 1996.

Table 2: Public AAU Institutions: Market Share Increases and Decreases in Federal Research Expenditures

An alternative approach to understanding how well the University of Missouri has "competed" with other public AAU institutions is to examine the market share of each institution over time. That is, of the total federal research expenditures secured by the public AAU institutions in a given year, what percentage of that total has each institution secured? How has that institution's market share shifted from year to year? One advantage of market share analysis is that it helps to level the playing field among major and less-than-major players who compete for research dollars. In Table 2, the market share of federal research expenditures has been calculated for the public AAU institutions in 1990, 1995, and 1999.

• Among the public AAU institutions, the market share for the University of Missouri held steady at 1.11% from 1990 to 1995. But since that time, the University's market share has increased from 1.11% to 1.54%.

Market Share (MS): An institution's federal research expenditures in a given year divided by the federal research expenditures for all public AAU institutions in the same year.

Source: National Science Foundation, Survey of Research and Development Expenditures at Colleges and Universities, FY 1999, B-33. Federally Financed R&D Expenditures at Universities and Colleges: Fiscal Years 1992-1999.

Table 3: Public AAU Institutions: The University of Missouri's Rank in Federal Research Expenditures

Table 3 ranks the public AAU institutions in terms of federal research dollars secured in 1990 and 1999.

• The University of Missouri ranked 27th among the 32 public AAU institutions in 1999. This is an improvement over its 1990 ranking (29th).

Table 4: Distribution of Federal Research Expenditures by Field

Table 4 displays the federal research expenditures by discipline area for the University of Missouri and other public AAU institutions.

- In 1999 the majority of federal research funds expended by the public AAU institutions were in the life sciences (52%) followed by engineering (16%), the physical sciences (13%) and environmental sciences (7%). The remaining disciplines accounted for 12% of the expenditures.
- Eighteen of the thirty-two public AAU institutions in 1999 relied on one disciplinary area to provide the majority of their federal research expenditures. In every one of these cases the discipline area was life sciences.
- Where Columbia and Kansas City secured 69% and 77% of their federal expenditures from life sciences, respectively, Rolla garnered 70% of its federal funds in engineering. St Louis received federal funds in more evenly dispersed percentages with 32% being in the physical sciences, 22% of its federal funding in life sciences, 19% in psychology and 27% in the social sciences.

Table 5: Market Share of Federal Research Expenditures within Each Discipline Area among the Public AAU Institutions

Table 5 displays each public AAU institution's market share within the eight discipline areas. The University of Missouri's federal research expenditures from the four campuses are pooled.

- The discipline areas where the University of Missouri secured the most significant market share were in psychology (3.4%), social sciences (2.2%), life sciences (1.7%), and engineering (1.6%).
- Market share leaders in each discipline area were: University of Michigan in engineering (10.9%), the University of California, Berkeley in the physical sciences (8.9%), the University of California, San Diego in environmental sciences (19.9%), and the University of Illinois in math and computer science (18.5%). In addition, the leaders by discipline area included the University of Washington in life sciences (9.7%), University Wisconsin-Madison in psychology (13.7%), and the University of Michigan in the social sciences (16.7%).

Section II:

RESEARCH EXPENDITURES FROM INDUSTRY

Table 6:

Industry-Sponsored Research Expenditures

Table 6 shows the growth in industry-sponsored research expenditures for the public AAU institutions from 1990 to 1999 and from 1995 to 1999. The institutions are arranged in descending order based on gain or loss since 1995. Please note that a definition of *industry-sponsored research expenditures* is provided in Section III: Definitions and Technical Notes.

- The University of Texas at Austin, Ohio State University, and University of California, San Diego have shown the largest gains in industry-sponsored research expenditures among the public AAU institutions.
- The institutions that lead the public AAU group in terms of industry-sponsored research are Pennsylvania State University (\$65.7 million), Ohio State University (\$52 million), and the University of Washington (\$51.3 million).
- The University of Missouri secured \$6.5 million in industry-sponsored research expenditures in 1998 and 6.7 million in 1999.

Table 6. Industry-Sponsored R&D Expenditures at Public AAU Institutions Since 1990 and 1995

SECTION III:

Research Expenditures by Source of Funds (Table 7)

Universities have sources other than federal agencies for funding research operations for their institution. These sources include funds from state & local agencies, business & industry, funds that are provided by the institution itself and other funding sources.

Table7: Sources of Research Expenditures

Table 7 shows the sources of research expenditures for the public AAU institutions. The institutions are arranged in descending order, based on the institution's percentage of research funds that are provided by the federal government.

- The University of Oregon, University of Pittsburgh, University of Colorado, and University of Washington received over 75% of their research expenditures from the federal government, ranking them at the top among the public AAU institutions.
- Among the thirty-two public AAU institutions, the University of Missouri ranks near the bottom in terms of the percentage of research funds it receives from the federal government.
- The University of Missouri funds a higher percentage of its research program (41% to 50%, depending on campus) with institutional funds than all but one other public AAU institution.

^{*} Institutional funds include: 1) institutionally financed funds and 2) unreimbursed costs. Source: NSF, Survey of R&D Expenditures at Colleges and Universities, FY1999,B-36 Federally Financed R&D Expenditures at Universities and Colleges: Fiscal Years 1991-1999.

SECTION IV: DEFINITIONS AND TECHNICAL NOTES

The following definitions, provided by the National Science Foundation (NSF), are most relevant to the tables in this report:

Federal research expenditures: when funds for research from the federal government are actually spent they are then considered "expenditures". For example, if the University received a two-year, two million dollar grant from NASA in FY1993 and spent \$1.5 million the first year and \$0.5 million in the second year, the federal expenditures would be \$1.5 million for FY1993 and \$0.5 million for FY1994. The reporting of expenditures, in contrast to obligations, provides a more accurate picture of an institution's research performance because it represents funds that have been already spent as compared to funds that have been promised or are expected. Furthermore, expenditure figures are less likely to show major shifts from year to year because funds received for multi-year grants are only reported in the year that they are spent.

Industry-sponsored research expenditures: these are funds provided by profit making organizations and expended by the University for research-related purposes. These amounts are reported in the fiscal year that they are expended.

The National Science Foundation has historically reported research obligations and expenditures from a number of different perspectives. In this report, specifically, academic Science & Engineering (S&E) obligations and expenditures for Research & Development (R&D) are examined. Thus, funds received from the federal government for Plant, Facilities & Equipment; Fellowships, Traineeships, and Training Grants; General Support, and for other categories have been excluded. For brevity, "Science and Engineering" and "Research and Development" have not been repeated in the text of this document.

For further clarification, please see "IB99-4: Defining Federal Research Expenditures, Federal Research Obligations, and Federal Research Awards" at the following website: http://www.system.missouri.edu/planning/Issue Brief/IB99-4.html.

Questions or Comments

Questions or comments should be directed to Dr. Lanette Vaughn, Associate Research Analyst, Institutional Research and Planning, 717 Lewis Hall, University of Missouri System, (573) 884-9201, vaughnla@umsystem.edu.

APPENDIX A AND B: RESEARCH EXPENDITURES AND CAMPUS COMPARATOR GROUPS

In response to the University-wide Strategic Planning initiative, the following tables were added to the Research Funding Report. Appendix A examines federal research expenditures relative to a different group of comparator institutions for each of the University of Missouri campuses. Specifically, annual growth and market share are reported. Appendix B examines industry-sponsored research expenditures relative to the same group of comparator institutions for each campus. In these tables, annual growth and rank are reported.
